

VIP[®] Shielded Air Filters

VIP[®] (Viscous Impingement) EMI Shielded Air Filters

Parker Chomerics VIP air filters are all metal EMI shielded panels used at the air intake on shielded enclosures which require low-velocity cooling air. Their filtering medium is multi-layer expanded aluminum, which can be coated with viscous oil for dust impingement.

VIP filters are specifically designed for applications requiring any of the following: maximum dust arrestance; easy removal and reinstallation; repetitive cleaning of excessive dust deposits; minimum penetration of the enclosure in restricted space situations.
